Aluminum is 100% recyclable without losing any of its natural characteristics. For applications where magnetism should be avoided, aluminum is a great choice. Aluminum quickly oxidizes, and the resulting surface coating of aluminum oxide resists further corrosion, air, water and chemicals. This protective coating is transparent, colorless and not painting. Aluminum can be easily stained with anodization, and keeps the paint very good. Aluminum can be finished in a variety of ways. Aluminum has the highest strength-to-weight ratio of any metal. Disadvantages : This is more expensive than steel. It is abrasive for instrumentation, or, more precisely, aluminum oxide coating, which is formed on it. Aluminum requires special processes to be welded.
